BASEC

Cybersecurity Compliance for Building Control Systems

The Next Generation in Building Control System Compliance and Risk Management

BASEC: **B**uilding Control **A**uditing, **S**ecurity, **E**numeration and **C**onfiguration tool

Provides a cost effective and scalable solution to identify, baseline, and certify the cybersecurity for building control systems.

1 KNOW YOUR SECURITY RISK POSTURE

- See your security configuration issues, accurately, through a single dashboard
- Automated, high volume scanning for the largest facility management programs
- Discover deficiencies and security trends amongst integrators and facility management teams
- Customizable rule sets for advanced cybersecurity programs

2 CUT COMPLIANCE COSTS

- Over 90% realized cost savings versus traditional, manual cybersecurity assessments
- Get access to audit results within seconds as opposed to weeks or months
- Secure, cloud-based analysis engine…no servers to deploy
- Cost effective and scalable so you can cover your entire environment

3 ACHIEVE AND DOCUMENT COMPLIANCE

- Consistent and repeatable compliance process
- Evaluate and track compliance against established security criteria
- Find and prioritize configuration lapses to stay in continuous compliance

Risk Management Enterprise Solution

The heart of *BASEC* is a secure, software-based analysis engine that examines and compares submitted configuration and deployment files against established security policy and requirements.

- Identify building control systems exposed to the Internet and vulnerable to attack

- Evaluate, document and track security controls
    - Designed for use by facility control engineers, no cybersecurity SMEs required
    - Provides point in time and continuous configuration auditing
    - Timely - Compliance auditing accomplished in seconds…not weeks
    - No architecture changes required
